More than a half of the Lisbon area was devastated by the 1755 earthquake, which can be seen as a call for providing highly accurate hazard and risk information to all relevant stakeholders. Recently, high-resolution earthquake hazard data have been acquired by the Seismic Hazard Observatory of Portugal (OSHORE) within the framework of the Lisbon Area Research Infrastructure for Environment and Sustainability (LARIS). The information generated by this facility can be exploited for risk and hazard assessment as well as for the improvement of infrastructure.
