KEYMACRO is an easy-to-use, intuitive, compact and powerful password manager. KEYMACRO includes a wide variety of useful and professional functions, designed to help you manage your passwords in an organized way, such as inputting, storing, viewing, deleting, encrypting, exporting and printing them. Why KEYMACRO? Keychain is not very secure. Your passwords and notes are stored in plain text in the Keychain. Anyone who knows your Mac's username and password can log into your Keychain without you knowing. So, you're losing a lot of time every day and wasting a lot of resources on searching for your passwords. KEYMACRO helps you manage your passwords in a more secure way. It allows you to keep your passwords in your Mac's Keychain, but encrypts them and stores them in the Keychain Access database (and on disk), which cannot be easily accessed by other users or by viruses. Thus, your passwords are safe and in the same place they always were, but only KEYMACRO can access them. KEYMACRO helps you keep your password safe. The software uses AES-256 encryption, an advanced encryption method. How KEYMACRO works? The software has an application-like interface, which includes an input text box and a password generator. When you enter your password, it will be encrypted with AES-256 encryption, and saved in the Keychain. KeyMACRO allows you to keep your passwords safe. The software encrypts your passwords using AES-256 encryption. It will use that encryption only when it needs to access them. KeyMACRO works similar to Windows Passwords, so if you are familiar with that, you can quickly and easily start using the software. What can KEYMACRO do? KEYMACRO allows you to: Add, edit and delete passwords Set the password length Print out a QR code Search all of the passwords in the Keychain Generate a new password Find the password in the Keychain Forget and delete the password It also includes a powerful password generator, that can generate random passwords and make the passwords editable.
